

FOR IMMEDIATE RELEASE

Sapio Sciences Exemplar LIMS 4.0 Released

Baltimore, MD – May 17, 2010 – Sapio Sciences is pleased to announce that it has released Exemplar LIMS version 4.0. With the 4.0 release, Exemplar extends its lead in configurability and flexibility. Key additions to Exemplar include:

- Fully extendible data model with support for complex relationships such as many to many relations all with zero programming
- Improvements in the built in querying and reporting tools
- Improvements in performance and scalability so a single server instance can now support several hundred concurrent users
- Enhancements to freezer management with support for configurable freezers and easy viewing of samples in shelves/racks/boxes

“Our goal since version 1.0 of Exemplar has been to drive down the cost and time of LIMS implementation projects while providing a rich end user experience and powerful workflow engine. Exemplar 4.0 fulfills this vision and now can be viewed not just as a LIMS but a general data management solution. “, says Julia Neel, Chief Architect at Sapio Sciences, “Pharmaceuticals and non-profits both suffer from a data deluge in the lab and in other areas, and Exemplar now allows them to go paperless rapidly with its completely configurable data model and user interface with zero programming.. Furthermore, Exemplar enables easy integration between itself and other databases and software which enables a full translational medicine pipeline to be built in a matter of days. This represents an unprecedented level of flexibility and cost reduction for data management projects.”

About Sapio Sciences

Sapio Sciences is a leading provider of LIMS, analytics and Data Management software, enabling scientists to manage samples as well as track detailed workflows and integrate with analysis tools. Exemplar LIMS breaks new ground in its breadth of functionality and ease of configuration. With built-in Sample Management, Step-by-Step protocol tracking and data management, Exemplar LIMS addresses the full life cycle of samples from receipt to processing and analysis. Sapio will continue to extend its ease of use and breadth of functionality across its product line, enabling organizations to reduce costs while increasing productivity and efficiency of both laboratories and researchers alike. Sapio has strong working relationships with leading platform vendors such as Affymetrix, Illumina and Applied BioSystems ensuring compatibility with technology from these leading companies.
